EXPERIENCE

The Ohio State University, Columbus, OH USA **August 2014 - present**
Ph.D. Student, Ultra-High Energy Neutrino Astrophysics

- Developed frequency and time-series analysis techniques to analyze radio emission from solar flares in the ARA prototype station; this is the first extraterrestrial emission observed by the array.
- Implemented filtering techniques to remove human-made noise from ARA data, and utilized them in a search for a diffuse flux of ultra-high energy neutrinos.
- Built and tested printed circuit boards for RF signal conditioning and power distribution, improving access to instrument dynamic range and operability in harsh environments.
- Lead and directed the mechanical and electrical systems integration of three new neutrino detecting stations, including the management of a three person team of junior students.
- Deployed to Antarctica for five weeks to lead the commissioning and calibration of five neutrino detecting stations; performed rapid on site assessment of instrument performance.

Washington University in St. Louis, St. Louis, MO USA **October 2012 - May 2014**
Undergraduate Research Associate, X-Ray Astrophysics

- Participated in X-Calibur collaboration to detect x-rays in the upper atmosphere, including fabrication of CCDs in a cleanroom environment.
- Wrote Monte Carlo simulations to explore Stokes parameters in x-ray astronomy by using methods of Bayesian confidence intervals.
